Nguyen Van Sang

Senior Full-stack Developer (Java & JavaScript) · 7+ years of experience

+84 967 863 046 sangnv046@gmail.com github.com/uvsnag Thu Duc, Ho Chi Minh City

SUMMARY

Senior Full-stack Developer with 7+ years of experience building enterprise logistics and business systems with Java, Spring Boot, React, and Next.js. Experienced in technical leadership, code reviews, mentoring, legacy system modernization, and AI-assisted development with Claude. Comfortable collaborating in English with international teams.

SKILLS

Backend	Java, Spring Boot, Spring Security, JWT, Spring Cloud Gateway, JPA/Hibernate, MyBatis, RESTful APIs
Frontend	JavaScript, TypeScript, React (Hooks), Next.js
Data & messaging	PostgreSQL, SQL Server, Redis, Kafka
Architecture	Microservices, Event-Driven Architecture, Legacy System Modernization
DevOps & Testing	Git, Docker, CI/CD, JUnit 5, Mockito, AWS (basic)
AI-assisted development	Claude, Prompt Engineering, Reusable AI Prompts & Agent Skills
English	Upper-Intermediate — CyberLogitec internal assessment, Level 3

WORK EXPERIENCE

CyberLogitec Vietnam Co., Ltd.

Feb 2023 – Present

CARIS Upgrade – Enterprise Logistics Platform

Sep 2025 – Present

Role: Senior Full-stack Developer · Team Size: 30

Tech Stack: React, TypeScript, Next.js, Spring Boot, MyBatis, SQL Server, JUnit 5, Mockito

A multi-tenant logistics platform covering sales, ocean/air freight, warehouse, accounting, and EDI, modernized from a legacy system.

- Migrated legacy UI screens and backend logic to Next.js, React, TypeScript, and Spring Boot while preserving existing business rules and system behavior.
- Designed reusable Claude prompts for screen migration and code verification, with AI generating about 60–80% of initial screen code. Reviewed and refined the output for quality and consistency, reducing migration time for medium-complexity screens from about 10 days to 2–3 days.
- Served as Backup Team Lead, coordinating tasks, reviewing and merging code into the main branch, and mentoring team members.

FWD Database Migration Toolkit

Jan 2025 – Sep 2025

Role: Sole developer · Team Size: 1

Tech Stack: Node.js, JavaScript, PostgreSQL

A data migration and validation tool for transferring data between production and development/test PostgreSQL environments.

- Built a streaming migration pipeline using PostgreSQL COPY, processing up to 100K rows per batch across 10+ modules and 100+ tables.
- Reduced routine migration time from 1–2 hours to 15–30 minutes and enabled developers to run migrations independently without waiting for a DBA.

- Implemented multi-stage validation (schema comparison, row-level checks, and record reconciliation) and personally identifiable information masking, achieving zero production incidents.

FWD – Freight Forwarding Platform

Feb 2023 – Sep 2025

Role: Senior Full-stack Developer | Deputy Team Lead · Team Size: 20
Tech Stack: Java, Spring Boot, MyBatis, PostgreSQL, JavaScript, Webix
Enterprise logistics platform supporting booking, warehouse, accounting, billing, and tracking.

- Developed and maintained full-stack features across business-critical modules.
- Reduced report generation time by 60% through SQL query optimization, index tuning, and resolving N+1 query issues.
- Supported Scrum sprint planning and technical decisions, conducted code reviews, enforced coding standards, and mentored junior developers.

WOWCNS Vietnam

May 2022 – Feb 2023

WowNet, MyOffice – Shopping & Membership Platform

Role: Full-stack Developer | Team Lead · Team Size: 8
Tech Stack: Java Spring, ReactJS, TypeScript, PostgreSQL
Online shopping and membership platform.

- Built backend business logic and full-stack features, and handled bug fixes and maintenance, keeping the system stable with minimal downtime.
- Led and mentored 4 developers.

ALLEXCEED Vietnam Inc.

Sep 2019 – May 2022

IFront – TV Service Management System

Role: Full-stack Developer · Team Size: 15
Tech Stack: Spring Boot, React.js, PostgreSQL
System for managing TV services.

- Started as a Backend Developer and grew into a Full-stack role, building web features with React Hooks and Spring Boot.
- Delivered code under strict client code review and coding standards, building strong habits of writing clean, readable, and maintainable code.

PERSONAL PROJECT

ShopFlow – E-commerce Order & Payment Platform

Aug 2026 – Present

Role: Solo developer · Repo: https://github.com/uvsnag/shopflow
Tech Stack: Java 21, Spring Boot 3.5, JPA/Hibernate, Spring Cloud Gateway, Kafka, Redis, PostgreSQL, Next.js, Docker

- Designed and implemented a 7-microservice architecture with separate databases, REST APIs, and Kafka-based asynchronous communication.
- Implemented an order saga with compensating actions for inventory reservation, payment, refunds, and payment timeouts, supported by the transactional outbox pattern and idempotent consumers.
- Strengthened payment reliability with idempotency keys, retry policies, circuit breakers, and server-side price validation.
- Secured APIs using JWT authentication and Redis-based login rate limiting.

EDUCATION & CERTIFICATION

HCMC University of Technology and Education (HCMUTE) – Software Technology **2015 – 2020**

English Proficiency Assessment – Level 3 (Upper Intermediate), CyberLogitec Vietnam **2025**
